ABSTRACT

This Kids Count report investigates county and statewide trends in the well-being of Florida's children. The statistical report is based on indicators of well-being in six areas: (1) child poverty; (2) births, including prenatal care access, infant mortality, low birth weight, and percent of births to unwed mothers; (3) teen parenthood; (4) child and teen safety, including child and teen mortality rates, teen violent deaths, runaways, and children affected by marriage dissolution; (5) education, including non-promotions, disciplinary actions, and high school graduation rate; and (6) youth and the law, including juvenile cases and youths transferred to adult court. The opening section provides information about the study and examines the crisis present among the youngest children in Florida. Section 2 presents statewide trends in demographics and indicators of child well-being. Section 3 presents state and countywide data for each indicator. Findings indicate that Florida ranks 48th in child well-being nationwide. Nearly 25 percent of Florida's children live in poverty. Advances have been made in the infant mortality rate, access to prenatal care, and child and teen violent death rates. Births to teen mothers have increased over 9 percent since 1980. In the last 5 years, the number of school disciplinary actions has increased almost 17 percent and delinquency cases have increased 32 percent. There are considerable racial differences in many of the indicators of well-being. Appendices present county rates for each indicator, racial and age group differences, terminology, and data sources. A Report on the Status of Florida's Children: Volume VI THE 1996 FLORIDA KIDS COUNT DATA BOOK

What happens to a dream deferred?

Does it dry up like a raisin in the sun? Or fester like a sone —
And then run?
Does it stink like rotten meat?
Or crust and sugar over —
like a syrupy sweet?

Maybe it just sags like a heavy load.

Or doer it explode?

—LANGSTON HUGHES

G

About Our Major Spowson

Florida was dismal — our state's rank in child well-being slipped to 48th in the nation, trailed only by Mississippi, Louisiana and the District of Columbia. We immediately issued a challenge to citizens, political leaders and private sector interests: We know how to lift children out of the depths of dispair, but it will take a collective will to act on their behalf at home, in the neighborhood, and When the 1996 National Kids Count Data Book was released, the news for community-wide.

make the case that child and family issues are business concerns, as well. Having KEY FACTS Pocket Guide for county-specific data and a Kids Count video. By challenge and stepped forward to become the Major Sponsor of this edition of securing the support of Barnett Bank, the Florida Center is well-positioned to KEY FACTS, and a series of future Florida Kids Count products including a the power and prestige of Florida's largest financial institution in our corner Barnett Bank, one of Florida's most powerful corporate citizens, heard that

creates the opportunity to show how investing in children is key to achieving economic development, workforce improvement and public safety goals. In addition to its support of KEY FACTS/Florida Kids Count, Barnett Bank and program called TAKE STOCK IN CHILDREN. TAKE STOCK, in partnership families to achieve academic success through scholarship incentives and one-onorganizations, will assist in motivating children and youth from low-income statewide implementation of a model mentoring and graduation incentive The Barnett Community Foundation is devoting significant resources to with a range of statewide corporate sponsors and community-based one mentoring programs.

Department of Child and Family Studies, University of South Florida. is prepared by the Florida Center for Children & Youth. EY FACTS ABOUT THE CHILDREN: Volume VI Original Florida Kids Count data was provided by the Florida Mental Health Institute,

Florida Kids Count profiles the well-being of Florida's children and families by tracking their status using select indicators of health, education, social and economic well-being. The data compiled by Florida Kids Count are gathered from public sources and supplemented by information from research studies, public policy analyses, and organizations engaged in data collection and advocacy work.

The purpose of Florida Kids Count is to inform Floridians and their policymakers about the quality of life of Florida's children and to build leadership and accountability for action on behalf of our children. Kids Count strives to help Floridians understand the realities of children's lives in their communities and statewide. *KEY FACTS*/Florida Kids Count Data Book answers questions such as, "How serious are the problems our children and families face?" "Are we adequately supporting families in meeting their children's needs?" "What progress has been made in improving the lives of the next generation of Florida citizens?"

Florida Kids Count is funded, in part, by the Annie E. Casey Foundation, the largest foundation in the United States devoted exclusively to improving the lives of disadvantaged children. A major goal of the Foundation's Kids Count initiatives is to foster a nationwide commitment to improving outcomes for vulnerable children and their families. National Kids Count has published an annual report on the status of children in the United States since 1989. The network of Kids Count projects extends to all 50 states and the District of Columbia.

Florida Kids Count, initiated in 1992, is administered by the Florida Mental Health Institute, Department of Child and Family Studies, University of South Florida, in partnership with the Florida Center for Children & Youth.

Along FMHI

The University of South Florida's Florida Mental Health Institute (USF/FMHI), soon to be known as The Louis de la Parte Florida Mental Health Institute, is the state's primary university research and training center for public mental health services. Each of the Institute's four departments provide in-depth research and training with a focus on the mental health needs of specific populations and service systems. Created by the Florida Legislature in 1969, FMHI became part of USF in 1984. Nationally recognized for its innovative research and training, USF/FMHI is an integral part of USF's optimism, vitality and can-do attitude.

The Department of Child and Family Studies (CFS) examines mental health issues involving children

from pre-kindergarten to adolescence through education, consultation and demonstration services, including parent training, positive behavior management and family preservation. CFS's Research and Training Center for Children's Mental Health, a federally funded program, improves services for seriously emotionally disturbed children and their families.

USF/FMHI is an official practicum and intern site for a growing number of university undergraduate and graduate programs. It also offers a predoctoral internship in clinical psychology and a multicultural training program to involve minority students in the mental health field.

This edition of *KEY FACTS ABOUT THE CHILDREN* is dedicated to the professionals and volunteers of Florida's Healthy Start Coalitions. The collective membership of our state's 30 Healthy Start Coalitions comprises more than 3,200 dedicated citizens representing medical, education, business, religious, civic, professional and community organizations.

The mission of Healthy Start is to plan, implement and support community systems of care for pregnant women and infants, with special emphasis on families at risk.

In 1991, through the vision and leadership of newly-elected Governor Lawton Chiles, the Florida Legislature, with bipartisan support, appropriated funds for six pilot Healthy Start Coalitions. Lawton Chiles was no newcomer, however, to the concern for healthy babies. As the grandfather of a low birthweight baby, and Chairman of the U.S. Senate Budget Committee, Lawton Chiles became sensitive to the issue of infant health in his personal and public lives.

In every child who is born,

under no matter what

incumstances, and of no

matter what farents, the

potentiality of the human race

too once more, and of each

is born again; and in him,

of us, our terrific responsibility

toward human life.

How to Use this Book and Get Mose Data

The data summarized in the 1996 Florida Kids Count Data Book are intended to continue our goal to inform citizens, private-sector community leaders, and government officials about the lives of our children. Hopefully, these data have provided and will continue to provide a sense of direction for collaborative efforts toward assuring a brighter future for all Floridians.

Every attempt has been made to make the data easy to understand and adaptable for use in a variety of activities including public information and education, media coverage, publication in professional journals and newsletters, speeches, workshops and conferences, and proposal writing.

Florida Kids Count seeks to strengthen the collective voice speaking on behalf of children through developing collaborative relationships with existing efforts working to assess the status of children. Florida's Health and Human Services Boards, Children's Services Councils, Juvenile Justice and Health Planning agencies, United Ways, and a constellation of statewide, district, county and municipal agencies are working towards a common goal — an authoritative, factual and comprehensive assessment of children's problems and workable strategies to address children's needs.

This publication presents written material concerning the State of Florida as a whole as well as county by county data in table format. The Appendices provide greater detail, such as race/ethnicity or age, on similar topics presented in the text section of the book. Additional data elements are available and can be obtained by contacting the staff of the Florida Kids Count Project at the University of South Florida.

The data presented in the Florida Kids Count Book are collected on an annual basis and are available in a variety of formats; these include spreadsheets as printed materials, on disk and electronically through the Internet. Our current Internet Site Address is http://lumpy.fmhi.usf.edu. You will find a selection for Florida Kids Count On-Line at that location.

One of our many goals is to continue to make accurate and timely data available to anyone who cares about the future of children, utilizing the most concise and opportune methods. With this purpose, we hope that this information will contribute to the empowerment of our communities and strengthen our families.

KEY FACTS data relating to demographics and population forecasts are obtained from the Florida Legislative Division of Economic and Demographic Research. To obtain Concensus Estimating Conference Population and Dempographic Forecast Report, contact: 904/487-1402.

KEY FACTS data relating to births, maternal health, child and teen death are obtained from the Florida Office of Vital Statistics. To obtain Florida Vital Statistics Annual Report, contact: 904/359-6360.

KEY FACTS data relating to education and school discipline are obtained from the Florida Department of Education, Division of Public Schools. To obtain Students in Florida Public Schools, contact: 904/487-2282.

KEY FACTS data relating to delinquency are obtained from the Florida Department of Juvenile Justice. To obtain Profile of Delinquency Cases and Youths Referred Annual Report, contact: 904/487-4097.

This edition of *KEY FACTS* does not comprehensively report data relating to child abuse, neglect or other catergories of maltreatment. Because statutory definitions for the various categories of maltreatment and case procedures are amended each year by the Legislature, it is difficult to report clear, consistent, and authoritative data, or to conduct year-to-year trend analyses. To obtain *Florida Child Protective Services Annual Statistical Report*, contact: 904/487-4332.

The Quiet Crisis

ERIC

Across the United States, and throughout Florida, we are beginning to hear the rumblings of a quiet crisis. Our children under the age of three and their families are in trouble, and their plight seems to be in worse peril every day.

To be sure, the children themselves are not silent; they are crying out for help. There is nothing quiet about the pain of illness, the agony of violence, or the sobbing sadness of loneliness and fear.

And their parents' anxiety about inadequate child care and the high cost of health care can be heard in kitchens, playgrounds, clinic waiting rooms, and workplace cafeterias in every town and city across the nation. Yet these sounds rarely become sound-bites. Babies seldom make the news: they don't commit crimes, do not do drugs, and don't drop out of school. We infrequently hear interviews with

parents as they anguish over finding decent, affordable child care and we rarely notice the unmet prenatal needs of expectant mothers . . . until it's too late.

Policymakers are rarely forced to contend with these realities. And so, the problems of our youngest children and their parents remain a quiet crisis, punctuated only by the occasional voice of reason that speaks to the needs of our youngest and most vulnerable citizens. Such a voice is being organized by the Carnegie Corporation of New York through its Starting

Points family of community projects. We in Florida are fortunate to have such a partnership — Florida Starting Points — to identify and meet the needs of young children throughout our state. The time is here; there is not a day nor a child to waste.

Consider the condition of America's youngest children and their families. In 1993, the National Educational Goals Panel reported that nearly half our infants and toddlers start life at a disadvantage and do not have the support necessary to grow and thrive. A significant number of children under age three confront one or more major risk factors:

Inadequate prenatal care. Nearly a quarter of all pregnant women in America, many of whom are adolescents, receive little or no prenatal care. Many of these pregnancies

are unintended: the United States has one of the highest rates of unintended pregnancy in the industrialized world. The risk of delivering a low birthweight baby with physical, behavioral, or intellectual difficulties is greater when a pregnancy is unplanned or when a woman does not receive adequate prenatal care. Despite incremental progress over the past five years, nearly one of five Florida newborns does not have the advantage of timely prenatal care.

Isolated parents. More divorces, more single-parent families, and less familial and community support have made parents feel more isolated

than ever before in raising their young children. One in three Florida babies is born to an unmarried mother, and one of six children in Florida will reside with a single parent before reaching age 18.

Substandard infant care. More than half of all mothers return to the workforce within a year of the baby's birth; many of their infants and toddlers spend 35 or more hours per week in child care. There is enormous concern over the quality and availability of infant care and its suitability to the developmental needs of such young children. Standards relating to staff/child ratios, interactive contact, health and sanitation must be a priority in designing either in-home, family-based or center-based infant care programs.

Poverty. Nationally, one of four families with children under age three lives in poverty. The majority of these families are headed by one

parent, usually the mother. These families often live in unsafe neighborhoods and have poor access to quality child care, health services, or family support programs. Florida's poorest age group? Our youngest children—more than 200,000 children under age six in Florida are poor.

Insufficient attention. Only half of infants and toddlers are routinely read to by their parents, and many parents give insufficient attention to their children's intellectual development. Teachers report that one in three American kindergartners arrives in school unprepared to learn.

These numbers add up to a crisis that threatens not only the healthy development of children themselves but also our nation's well-being. The National Educational Goals Panel identified four key dimensions of

We cannot stand idly by

and expect our dreams

to come true

under their own power.

The future is not a gift;

it is an achievement.

-ROBERT F. KENNEDY

school readiness, our nation's first education goal: physical well-being and motor development, social and emotional development, language usage, and the mastering of learning styles that allow children to approach new tasks and challenges effectively. Currently too many children are entering school not ready to learn, jeopardizing later academic achievement. If left unattended, this crisis will continue to compromise our nation's economic strength and competitiveness.

The first three years of life are a crucial "starting point" — a period particularly sensitive to the protective mechanisms of prenatal and family support. Parents and experts have long known that how individuals function from the preschool years all the way through adolescence and even adulthood can hinge on the experiences children have in their first three years.

Babies raised by caring, attentive adults in safe, predictable environments are better learners than those raised with less attention in less secure settings. Recent scientific findings corroborate these observations. With the help of powerful new research tools, including sophisticated brain scans, scientists have studied the developing brain in greater detail than ever before.

This research points to five key findings that should form a foundation for our nation's efforts to give our youngest children a healthy start:

First, the brain development that takes place during the prenatal period and in the first year of life is more rapid and extensive than we previously realized.

S S

nerable to environmental influence than we Second, brain development is much more vulever suspected.

Third, the influence of early environment on brain development is lifelong. Fourth, the environment affects not only the number of brain cells and number of connections among them, but also the way these connections are "wired."

difficulties. In some cases these effects may be Fifth, new scientific evidence documents the tion. The risks are clearer than ever before: an adverse environment can compromise a young child's brain function and overall development, placing him or her at greater risk of developing a variety of cognitive, behavioral, and physical irreversible. But the opportunities are equally dramatic: a good start in life can do more to promote learning and prevent damage than we negative impact of early stress on brain funcever imagined.

The solution of adult problems

A well-functioning family during the first few years of a child's life child's early socialization. By establishing conhelping children to control disruptive or impulsive behavior, parents lay provides a particularly important building block for healthy development. Just as protective factors help children avoid later problems, risk factors - such as low birthweight or growing up with parents who have poor parenting skills — lead to later problem behaviors. Such negative factors

₹

are often multiplicative, not additive, in their effects.

Research shows that when children show only one risk factor, their outcomes are no worse than those of children showing none of the identified risk factors. But when children have two or more risk factors, they are four time as likely to develop social and academic problems.

The importance of these early years to the future healthy development of children cannot be minimized. Although children are resilient and can benefit from later intervention, the costs of reversing the effects of a poor start in life increase as the child grows older, and the chances of success diminish.

A well-functioning family

during the first few years of a child's life

provider an important building block

for bealthy development.

There are complex public policy implications based on the evidence that the first years of life are so critical for each child's later development. Just as the problems are many and massive, single solutions, whether in law, policy or program, will be inadequate.

The nation as a whole, each state, jurisdiction and private sector entity should, at a minimum, find ways to reduce risk for young parents, enhance the health, social development and physical environment of our youngest children, and promote policies which provide access to an array of preventive services so that we can invest in success, rather than pay for failure.

Pay Attention - Take Action

ERIC

KEY FACTS ABOUT THE CHILDREN is a book of numbers — cold statistics. But each fact represents the warm faces and complex facets of the lives of our children.

When we look into the eyes of our children we renew our sense of hope and self-worth. Our children are our legacy. They are the future through whom the past will be judged.

Children are children but once, but the experience of their early years will echo throughout their lives.

Florida's children should, and could, be safer, healthier, more secure and better educated. Each child is a mix of mind, body and experience, always changing, for better or worse.

The choices we make as parents, neighbors, citizens and leaders affect the lives of every child, not just those whom we know by name. Philosopher John Dewey said: "What the best and wisest parent wants for his child, so must the community want for all its children."

The facts in your hands tell a story of what could be possible if we devote ourselves to investing the time, talent and attention our children need to survive and succeed.

While all the chapters are not yet written, the new century is close, and the time has come to make certain that our children are ready, willing and able to meet the challenges they are certain to face.

Like the development of a child, effective advocacy is a growth process. Experimentation, taking risks, learning from mistakes and building upon achievements are integral elements of the art and science of advocacy. *KEY FACTS* is a tool for every Floridian's use in constucting a better life for the children and families of Florida. But it will take concentrated attention and tireless action to create a state which is a more child and family-friendly place to live and prosper.

A child is a person who is going to carry on what you have started. He is going to sit where you are sitting, and when you are gone, attend to those things which you think are important. You may adopt all the policies you please, but how they are carried out depends on him. He will assume control of your cities, states and nations. He is going to move in and take over your churches, schools, universities, and corporations. All your books are going to be judged, praised or condemned by him.
--

-ABRAHAM LINCOLN

Demographics

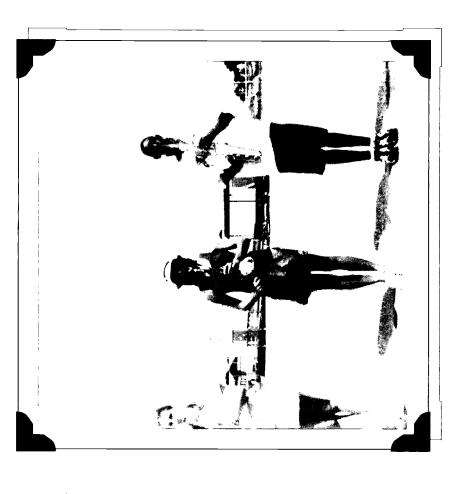

ERIC

During the 1980s, the population of Florida increased 33 percent, a net population growth of 3.2 million. Currently the fourth most populous state, Florida's population in 1995 was 14.1 million, and is projected to grow to 15.4 million by 2000, and 17.8 million by the year 2010. During the 30-year period 1980-2010, Florida's population will have grown an astonishing 83.5 percent.

Florida child population (under age 18) in 1994 was 3.1 million, a 33.1 percent increase from 1980. It is projected that Florida's child population will increase to 3.8 million by the year 2010.

While the population of children continues to increase, a significant shift in the proportionate change by age group is occurring. Although the number of young children (ages 0-4) increased by 67.6 percent during the period 1980-1994, the number of older teens (ages 15-17) actually decreased by 6.2 percent during that same period.

In contrast, the population of young children (ages 0-4) is projected to increase just 6.6 percent during the period 1995-2010, while the population of older teens (ages 15-17) will increase by 42.8 percent during that same period.

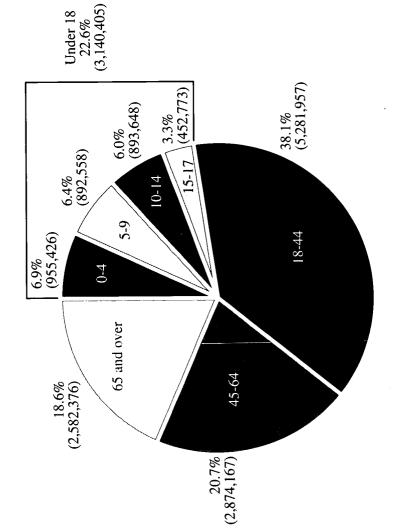

Florida's impending teenage population unge

holds significant implications

for the future of the state and its families.

ල ආ

Florida Population by Age, 1994

In 1980, the largest age group within the child population was the 10- to 14-year-olds. By 1994, the phenomenal growth of 0-4 year olds resulted in that group becoming the largest. Demography 101 teaches us that survival mandates aging — individuals who live a full decade will inevitably age 10 years. Therefore, due to the recent surge in Florida's young child population, teenagers will again become the largest child age group by the year 2010.

Florida's impending teenage population surge holds significant implications for the future of the state and its families. The most immediate task is to ensure that early intervention programs are accessible to today's youngest children to reduce their risk of long-term problems when they grow to be teenagers.

Meeting the growth needs of Florida's children requires service planning that looks beyond traditional annual fiscal year budgeting. This incremental, short-term approach to children's budgeting has dire consequences. Failing to provide babies, toddlers and preschool aged children the care they need at key developmental stages results in damage which is difficult to rectify.

Number of Children by Age Categories for 1980 & 1994 and the Percent Change from 1980

Florida's teenagers of the 21st Century are today's little ones. The quality of life we aspire to achieve as a state is inextricably linked to the quality of health care, early childhood services and family supports we provide in the closing years of this century.

Child Poverty

ERIC

Childhood poverty is an indicator of both current and future risk to the well-being of young Floridians. Poor children are less likely to have the health care and nutrition they need to develop their fullest neighborhoods that are unsafe and environmentally dangerous. potential. In addition, poor families are more likely to live in

delinquency. Of course, many children who grow up economically strength and the caring commitment of others. Nevertheless, there is irrefutable evidence that reveals correlations between poverty disadvantaged overcome the perils of poverty and manage to survive and succeed — they beat the odds through personal Child poverty is also associated with negative outcomes in adolescence, such as school failure, teen parenthood and and an array of health, social, and educational problems.

Florida's children in poverty grew to nearly one in four. According In 1990, nearly one in five (18.7 percent) of Florida's children was Florida grew by 19 percent between the years 1985-1993 although living in a poverty-level household. By 1993, the percentage of in the nation as a whole, the percentage of children in poverty to the 1996 National Kids Count Data Book, child poverty in remained the same during that 8-year period.

Poor children are less likely

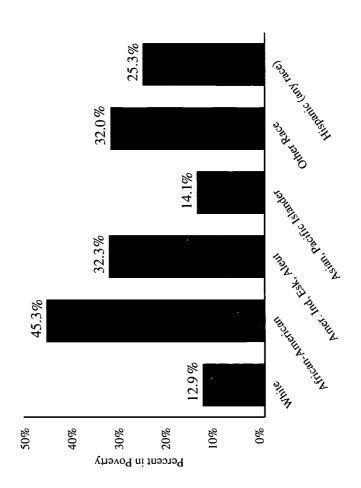

to bave the health care and nutrition they need

to develop their fullest potential.

点

Living in Poverty Within Each Race/Ethnicity, Percent of Florida Children Under Age 6 1990 Census

Most striking about child poverty is the stark evidence of race one county (Dixie) has as many as one-third (34.9 percent) of White children at the poverty level, in 21 counties a majority of African-American children are poor. In 61 of Florida's 67 disparity. While one of nine (12 percent) White children are poor in Florida, more than four of ten (41 percent) African-American children are poor. At the county level, while just counties, more than one-third of all African-American children are poor.

household were in poverty in Florida. More than one in five (47.3 percent) of related children living in a female-headed contributing factors to child poverty. In 1990, nearly half Florida children (22.5 percent) live in single parent Family composition is one of the most significant households. The 1996 National Kids Count Data Book reports that from 1985-1993, the proportion of Florida families with children headed by a single parent increased 20 percent. Currently, three of 10 Florida families with children are headed by a single parent.

ERIC Full fiest Provided by ERIC

For many children, having a parent who is employed does not necessarily mean freedom from poverty's grasp. In fact, according to the 1996 National Kids Count Data Book, one of 11 Florida children (nearly 300,000) live in a household where an adult works full-time yet the family's income is below the federally defined poverty level of \$11,890/year for a family of three.

Numerous changes in federal and state law, including public assistance/welfare reform, raises in the minimum wage, and the shifting of responsibility for economic services and medical assistance programs to the state and community levels will doubtlessly have significant impact on family and child poverty. Precisely what that impact will be, whether positive or detrimental to the well-being of children, must be measured and evaluated over the years ahead. It is certain, however, that the private employment and charitable sectors must increase their involvement in developing and implementing services for parents and children who previously relied on government's safety net.

A healthy birth is the most important indicator of childhood suffer from disabling conditions than their unhealthy peers. well-being. Babies who are born healthy are less likely to

Book, Florida's infant mortality rate improved by 24 percent mortality. According to the 1996 National Kids Count Data from 1985 to 1993. By 1994, Florida's infant mortality rate of 8.1 deaths per 1,000 live births was, for the first time on monumental progress in reducing birth risk and infant Florida has, over the past decade, worked to achieve record, better that the national rate of 8.4 per 1,000.

outreach services for pregnant women, just 1.1 percent of Of the 190,546 babies born in Florida in 1994, more than four of five (81.3 percent) had the advantage of early prenatal care. Through remarkable improvements in babies born in Florida in 1994 had no prenatal care.

In the great forest a little elephant is born.

His name is Balar. His mother loves him very much.

She rocks him to sleep with her trumh

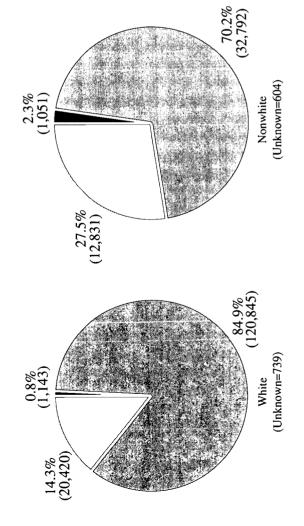

while ringing robbly to him.

ಬ ಟ

Access to Prenatal Care by Race, 1994

Low birthweight is a measure of immediate risk to a newborn; low birthweight babies account for about 60 percent of all infant deaths before age one. It is also a measure of future risks to the child. Low birthweight babies who survive are about three times more likely to experience serious health and developmental problems, such as sight and hearing deficiencies, chronic respiratory problems, and learning difficulties.

Although neonatal researchers do not know all the factors that cause low birthweight, the health of the mother and the care she receives when pregnant are the most important factors in determining infant health. Smoking, inadequate nutrition, alcohol and other drug use, and stress during pregnany all increase the likelihood that a mother will have a low birthweight baby. Similarly, mothers who receive late or infrequent prenatal care are more likely to experience risk births, in part due to undetected and untreated physical conditions like high blood pressure.

25

S S

Infant Mortality Rate by Race from 1980 through 1994

Of the approximately \$11 billion spent nationally on infant health care, more than one-third (\$4.1 billion) is spent for the care of low birthweight babies. Most of these dollars are devoted to saving very tiny infants, born prematurely, and weighing less than 1500 grams (under 3 pounds).

While medical technology has made remarkable advances in the ability to save such fragile babies, it's important to recognize that a proportion of savings would be realized, in both financial and human terms, if prevention care was made universal and accessible to all pregnant women, no matter their age, income, or location of residence.

Political decisions which would result in excluding certain pregnant women from care, because of their immigration status, income, or other factors would only aggravate the problem of access to preventive health services and escalate the costs for treating low birthweight and other medical emergencies.

As is the case with poverty, race disparity is clearly evidenced in relation to the status of newborns. The infant mortality rate for White newborns is 6.5 deaths per 1,000 births while the rate for Non-white babies is nearly double at 12.9 per 1,000. While 6.3 percent of White babies were born low birthweight (less than 5.5 pounds) in 1994, 12.1 percent of Non-white babies were born low birthweight.

Teen Parenthood

ERIC

If first believe they have atternative life oftions,

ruch as education success and a career,

they are much more libely to delay parenthood.

The social and economic consequences of teen parenthood can be devastating. Accessing adequate health care, pursuing education, and achieving economic self-sufficiency are all great challenges for a teenager who becomes a parent. The crisis is especially poignant for the 10,888 babies born to mothers age 16 and younger in 1994. Each day in Florida, an average of 29 girls under age 17 become mothers.

Births to White teens represent one in ten (10.9 percent) of all births to White mothers, while more than one of five (22.3 percent) births to Non-white mothers are to teenagers. The Non-white teen birth rate of 113.5 per 1,000 is more than double the 50.7 per 1,000 rate for White teens. The overall birth rate for Non-white women (all ages) is 21.6 per 1,000 population and the overall rate for White women is 12.2 per 1,000.

The teen birth rate is a function of teens' capacity and motivation to prevent pregnancy. If girls believe they have alternative life options, such as education success and a career, they are much more likely to delay parenthood. Absent these hopes for a brighter future, many teens seek immediate gratification, sometimes defined as a sexual relationship with an adult man. The Alan Guttmacher Institute reports that as many as 70 percent of teen mothers were impregnanted by adults, not teenage peers. Florida's newly developed ENABLE program is designed to provide state matching support to community-based projects which emphasize skills-building and positive alternatives for teenagers at risk of pregnancy.

Child and Teen Safety

Over the past decade, Florida has achieved reductions in both child (ages 1-14) and teen (ages 15-19) violent death rates. According to the 1996 National Kids Count Data Book, Florida's child death rate was reduced by 19 percent for the period 1985-1993, and the state's teen violent death rate was reduced by 9 percent during that same period.

Even with these improvements, 1,538 young Floridians ages 1-19 died in 1994, 443 of whom as the result of injuries sustained in motor vehicle crashes. An analysis of teen violent deaths (ages 15-19) reveals that while preventable injury (accidents) is the predominant cause of death for White teens, homicide is the leading cause of death for Non-white teens.

The Florida Abuse Hotline received 118,460 reports of abuse, neglect, exploitation or threatened harm against children during 1994-95. There were 319,821 alleged maltreatments in these reports received of which 144,804 (45 percent) were in the neglect category; 109,780 (34 percent) in the abuse category; 61,967 (19 percent) were threatened harm; and 3,270 (1 percent) were alleged special conditions.

There is a valid and growing concern over the high-risk behaviors of teens which lead to injury, disease and fatalities. The Florida Department of Education's 1994 Risk Behavior Survey revealed that a majority of youth ages 10-17 has engaged in high-risk activities, including: more than 50 percent drinking alcohol within the past 30 days; 23 percent smoking tobacco regularly; 33 percent experimenting with marijuana; and 57 percent engaging in sexual intercourse (two of three without contraceptives).

Youth who persistently engage in high-risk behavior

place themselves, their peers, and members

of the community-at-large in danger.

The Risk Behavior Survey also reported that 40 percent of Florida teen males have carried a weapon within the past 30 days, and 30 percent of female respondents had seriously considered suicide within the previous 12-month period.

Youth who persistently engage in high-risk behavior place themselves, their peers, and members of the community-at-large in danger. Teens who are maltreated in their younger years are prone to want to escape their abusive environment by running away or seeking refuge in substances which numb their pain, if only temporarily.

Leading Causes of Death By Age Category, 1994

Teen Violent Deaths by Race and Gender, 1994 (Age 15-19)

	Domilotion		Number (Rate per 10,000)	0,000)	
Race/Gender	Age 15-19	Accidents	Suicides	Homicides	Total
White Males	319,403	185 (5.8)	68 (2.1)	46 (1.4)	299 (9.4)
White Females	302,470	74 (2.4)	4 (0.1)	11 (0.4)	89 (2.9)
Nonwhite Males	88,779	56 (6.3)	10 (1.1)	(8.7) 69	135 (15.2)
Nonwhite Females	88,726	7 (0.8)	2 (0.2)	7 (0.8)	16 (1.8)

Although confrontation of authority and taking risks are usually thought of as natural facets of adolescent development, the accessibility of lethal drugs and firearms, the dangers of sexually-transmitted disease and driving under the influence has raised the stakes for too many teens.

Our communities should provide alternatives to destructive behavior through positive recreation and opportunities for responsible involvement in service projects which promote self-esteem and show young citizens that there is a future that they govern.

Education

Our schools are direct reflections

of the neighborhoods and communities

where they are located.

Public school enrollment continues a steady climb in Florida, reaching 2.1 million in the 1994-95 school year, a 38.5 percent increase over the decade.

By most measures, school success paves a path to economic productivity for both the individual student and for society. That path, however, can be rutted with the challenges of ill health, family dysfunction and threats to personal safety and security.

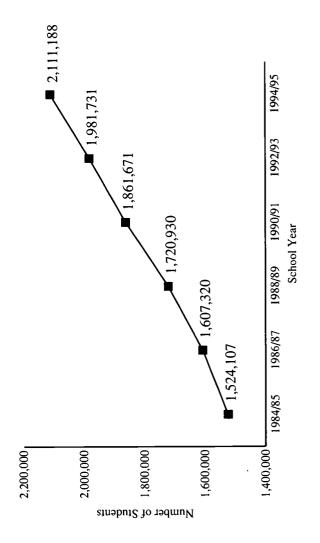

Our schools are direct reflections of the neighborhoods and communities where they are located. Schools, and the students and staff which populate them, are not immune to the increased levels of violence and disruption which exist in the homes and streets of our nation and state.

Children learn better if they are prepared to accept the challenges of education, but many barriers still hamper young peoples' futures. For example, the Carnegie Foundation for the Advancement of Learning reported that in 1992, more than one of three (38 percent) children entering Florida's kindergarten classes were not fully ready for school.

The more we learn about the early months and years of life, the more we realize the impact of brain function, social interaction, and environmental influence on child development. Education is a process that is either enhanced or impeded based upon the experiences of the child during the period spanning from prenatal to age five.

ලා ලා

Enrollment in Public Schools from 1984/85 through 1994/95

While current school funding formulas calculate the cost of education per child for ages 6-18, there may be some logic in rethinking the starting date of public support for education services.

Since most cognitive, emotional and social achievement occurs in infancy and toddlerhood, our nation, states and communities should be looking at creative ways to support parents and other caregivers as they are the key providers of education preparation for children.

Traditional "school reform" usually focuses on the systems of instruction, personnel recruitment and training, and technology within the bounds of K-12 education. It is timely to refocus on the principle that the quality of education performance is hinged on the quality of the child in the classroom.

The key to that quality is the foundation of preventive health, social interaction, and a supportive family life. Early investment in children and their well-being is an essential ingredient for improving school success.

43

expulsions. Between the 1991-92 and 1994-95 school years, Some of the challenges facing education can be calculated the rate of disciplinary actions in Florida's public schools in the rate and volume of disciplinary actions, including incidents of corporal punishment, suspensions, and increased 16.8 percent. During the 1994-95 school year, there were 192,841 incidents suspension; and 13,900 incidents of corporal punishment in of out-of-school suspension; 217,170 incidents of in-school Florida public schools. During that year, 85,916 Florida students were not promoted to the next highest grade.

disciplinary actions for students. In 1994-95 African-American children while the rate for Hispanic children was 166.7 per 1,000 and for White received disciplinary actions at the rate of 300.1 per 1,000 students, Race disparity is again in evidence when examining the rate of Non-Hispanic children 171 per 1,000.

representing the remaining racial/ethnic backgrounds make up less than 2 percent of total enrollment and have much lower rates of disciplinary 48.2 per 1,000 and for White Non-Hispanic 33.7 per 1,000. Children African-American students is 53.7 per 1,000, for Hispanic students Regarding non-promotion to the next highest grade, the rate for actions and non-promotions than their peers.

Youth and the law

ERIC

Forecasting the future of Florida's youth

crime problem is a complex process that must be

firmly based on facts and research at hand.

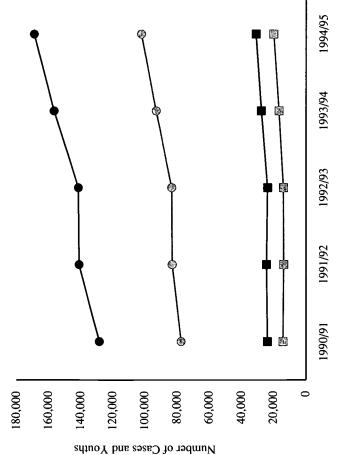

delinquency has outpaced the proportional growth in the Florida teen population by nearly 10-to-1. In 1994-95, 168,996 cases alleging delinquency by 102,275 youths were referred for Over the past decade, the volume of cases alleging youth processing by the Florida Department of Juvenile Justice. Between the years 1990-91 and 1994-95, while the overall number referrals increased 40 percent, while more serious felony referrals increased 19 percent. This represents a significant shift, reversing the trend of the previous decade when the growth of felony cases of delinquency cases increased 32 percent, misdemeanor offense outpaced that of lesser offenses.

21 percent for African-American males, 63 percent for White Over the five year period of 1990-91 to 1994-95, the number of delinquency cases increased 27 percent for White males, females, and 55 percent for African-American females. The most serious category of offense — murder/manslaughter murder/manslaughter cases for youths under age 18 remained relatively stable (1991-92:156; 1992-93:164; 1993-94:162) accounted for 163 cases in 1994-95. In preceeding years,

This stability is little comfort, of course, because even a single firearms, and the projected increase in teenagers over the next homicide is one too many. With the increased accessibility of decade, communities must take steps to ensure that explosive violence does not erupt among Florida's youth population.

A 1996 report by RAND entitled *Diverting Children from a Life of Crime: Measuring Costs and Benefits* provides a comprehensive analysis of four approaches to intervening in the lives of children at risk of trouble with the law. They define this "risk population" as children of young, poor, single mothers.

The four approaches under RAND analysis were: 1) Home visits by child care professionals from the point of birth through early childhood years, including four years of child care for parents who worked; 2) Parent training and therapeutic services for families of young school-aged children who began showing signs of aggressive behavior; 3) Four years of incentives, including cash scholarship availability, for disadvantaged students who showed promise to graduate; and 4) Monitoring and supervision of teens who had already exhibited delinquent behavior.

The research concluded that over the period analyzed, graduation incentives provided, dollar-for-dollar, the most cost effective crime diversion outcomes, followed by parent training, delinquency supervision, and early intervention. The strength of early intervention services was, in the report's analysis, less effective compared to the other approaches because of the breadth of the population of children served and the lapse of time between early care and future teen activities. The researchers acknowledged and cited many other studies pointing in the direction of the effectiveness and quality of early intervention as a strategy for improving school performance and social behavior.

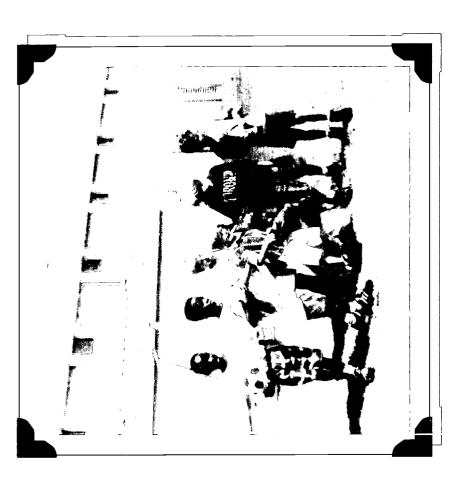

Youths

50 T

The value of the RAND findings for Florida policy-making is the ability to target private- and public-sector resources on a population of students who are currently in school but see little hope of being able to achieve beyond their family's economic means due to the high cost of higher education. Programs such as Communities in Schools and TAKE STOCK IN CHILDREN are examples of innovative approaches that combine scholarship incentives for graduation with on-site mentoring and supervision.

ERIC

For Florida to reach its public safety goals of safe streets, crime-free neighborhoods, and violence-free homes, youth must be reached and given a foundation of hope and opportunity. Crime-fighting cannot be viewed only through the corrections/incarceration model of disincentives — "the fear of getting caught." For many teenagers, having a well of hope from which to draw would be a far more effective and less costly approach to ensuring that their future can be what they now only dream.

The roots of crime lie deep in the foundation of social neglect.

Only social change can bring any measure of cure. Urtil social and economic conditions improve,

crime will continue to flourish and rociety will continue to pay the price.

Prevention Works

ERIC

Two men were fishing in a stream when an infant floated past. The first fisherman jumped in, rescued the child and handed him up to safety into the second fisherman's arms. No sooner had they settled the child on the grass, when a second infant floated along. Again, the fisherman jumped in and rescued the baby. A third baby floated along, a fourth, and

The fisherman saved each in turn. Finally, a whole group of babies came floating downstream. The first fisherman grabbed as many of he could and looked to see his friend walking away. "Hey," he shouted, "what's wrong with you? Aren't you going to help me save these babies?" To which the second fisherman replied, "You save these babies, I'm going up stream to see who's throwing all those babies into

Folk Parable

When it comes to children, it's not whether we pay, but when. It may be argued that Florida's dismal rankings in both educational failure and youth crime are the direct result of failures to provide prevention services in earlier years. In other words, we got what we didn't pay for. Florida's policy makers have these investment opportunities:

		1	919	
.	on childhood immunizations	Z S	\$10	in later medical costs
\$1	on comprehensive prenatal care for women	OR	\$3.38	in medical costs for intensive newborn care
\$1	for quality preschool	OR	\$4.75	for remedial education, crime and other costs
\$	for a measles shot	OR	\$5,000	for hospitalization of a child with measles
\$3,000	per family for preservation services that help keep families together	OR	OR \$10,000	for one year intensive child abuse therapy
\$3,925	for a complete prenatal care and obstetric health package	OR	\$70,000	for the first year of services for a baby born low birthweight and with developmental delays
\$5,000	for drug treatment of an addicted mother	OR	\$30,000	for medical care of a drug-exposed baby for 20 days
\$6,700	per youth per year for intensive community based services	OR	\$40,000	to maintain a youth at a correctional facility

Births in Florida

The process for determining race on all 1994 data tables from the Office of Vital Statistics is now based on the race of the mother.

Birth Statistics — all birth data are reported by the parents' usual place of residence (regardless of where the birth occurred). The mother's residence is used when it differs from the father's residence. Race is usually counted as it is stated on birth and death certificates, with such designations as "Hispanic" counted as white.

Birth Rate — defined as the number of births per 1,000 resident population. Birth rates were obtained from Florida Vital Statistics. Midyear population estimates were furnished by the Office of Planning & Budgeting, Executive Office of the Governor.

Births to Teen Mothers — the number of births to all females under age 20. Data include the percent of teen births to all births within each race and total for the same year.

Births to Unwed Mothers — the number of births to mothers who were not married at the time of the birth.

Early Prenatal Care — births to mothers of all ages by race, and total who received prenatal care in the first three months of pregnancy.

Fertility Rates — the number of births to females of a specific age group per 1,000 female population of the same age group. Fertility rates are presented for females 15 to 19 and 20 to 44 years of age. Note that the number of births for females age 20 to 44 included those to mothers 40 and above; this figure was 104 in 1993 and unavailable for 1994. Midyear population estimates were provided by the Division of Economic and Demographic Research, Joint Legislative Management Committee, Tallahassee, Florida.

Infant Mortality Rate — the number of infant deaths age under one year per 1,000 live births.

Low Birthweight — infants who weighed less than 2,500 grams (5.5 pounds) at birth.

Teen Birth Rate — the number of births to females 15 to 19 years of age per 1,000 female population of the same race and age group. Midyear population estimates were provided by the Division of Economic and Demographic Research, Joint Legislative Management Committee, Tallahassee, Florida.

An asterisk (*) represents unreliable rates and ratios, those with denominators less than 100.

Sources

Data were obtained from the Florida Department of Health and Rehabilitative Services, Office of Vital Statistics, Jacksonville.

Child Well-Being

Children Affected by Dissolution of

Marriage — the number of children under age 18 who were affected by the collective number of dissolutions of marriage. In Florida, there were 6,750 dissolutions of marriage with an unknown number of children and 40,100 with no minor children affected in 1994.

Child Deaths — the number of deaths from all causes to children 1 to 14 years of age.

Runaways — the number of youth who were reported as a runaway by the Florida Department of Law Enforcement (FDLE), Uniform Crime Reports.

Violent Teen Death Rate — the number of deaths from homicides, suicides, and accidents to teens 15 to 19 years old, per 10,000 teens of the same race and age group. Rates should be interpreted with caution in some counties due to low numbers of teens and deaths. Population

Juvenile Runaway data were provided by the Florida Department of Law Enforcement (FDLE), Florida Crime Information Center, Monthly Report of Runaway Juveniles, Tallahassee, Florida.

Data on deaths to children and teens were obtained from the Florida Department of Health and Rehabilitative Services, Office of Vital Statistics, Jacksonville, Florida.

Data on dissolutions of marriage and number of minor children affected were obtained from the Florida Department of Health and Rehabilitative Services, Office of Vital Statistics, Jacksonville, Florida.

Education

Total Enrollment — the number of students of any race or ethnicity enrolled in the Florida public school system. The student membership count is conducted in the Fall of each school vear.

Hispanic — the Florida Department of Education has defined Hispanic as a person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin regardless of race.

Disciplinary Actions — the number of disciplinary actions, including in-school suspensions, out-of-school suspensions, corporal punishment, and expulsions. More than one disciplinary action per student may have occurred during the year.

Dropouts — the number of students over the age of compulsory school attendance (between the ages of 6 and 16) who are not attending and are not considered exempt from school.

Students not exempt and under age 16 who stop school attendance are defined by statute as habitual truants.

Free and Reduced School Lunch Program — the National School Lunch Program of the Child Nutrition Program is funded by the U.S. Department of Agriculture and administered through the Florida Department of Education. Schools and Residential Child Care Institutions are eligible to participate in the programs if they are non-profit and serve children less than 21 years old. Eligibility is based on reported income. In 1993/94, a child living in a household with an income of \$18,655 or less qualified for the Free Meal.

Graduation Rate — the percentage is calculated by dividing the number of first time ninth graders into the number of students who receive, four years later, a high school diploma, a certificate of completion, a special certificate of completion, and students 19 years of age or younger who receive a general equivalency diploma.

HSCT Math and Communication — the percentage of 11th-grade students who obtained a passing score within each section, mathematics and communications, of the High School Competency Test.

Non-Promotion — the retention of a public school student in the same grade rather than advancing the student to the next appropriate grade level.

Rate of Non-Promotion — the number of non-promotions for all grades (pre-kindergarten through 12th) per 1,000 enrolled students within each or ethnic group.

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

Check here For Level 1 Release: Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical) and paper copy.

Signature:

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

The sample sticker shown below will be affixed to all Level 2 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN OTHER THAN PAPER COPY HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES

INFORMATION CENTER (ERIC)

Check here For Level 2 Release: Permitting reproduction in microfiche (4" x 6" film) or other ERIC archival media (e.g., electronic or optical), but not in paper copy.

Level 1

Level 2

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

"I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries."
